FieldKit Portal Release 0.4.4

2025-10-21 - Lindsay Starke - Comments (0) - Portal Updates

We just released an update for the FieldKit Portal.

Enhancements

We've built a moderation function, so that comments that violate community standards can be removed more easily by the FieldKit team.

Bug Fixes

We fixed an error in data export when a module is moved from one bay to another on a FieldKit station, as well as one that occurred when a module had no GPS location data

We fixed an error that happened when trying to rename a module

We also cleaned up some things under the hood to make the Portal easier to use—read it all here.

User Experience Updates

We cleaned up the nomenclature to be more consistent when navigating the Project Details and Station Details pages here, here, and here

We ensured the Data View page will be better displayed in Spanish when the language is selected

We have enhanced the map view on the portal.

We improved the experience when you adjust the time period being viewed on mobile.

We made the "Add Chart" button functionality more clear to use

We made it clearer when you click on a private project

We also tidied up a couple of small things that will make the Portal look a bit nicer when you dig into projects and data—read about it all here.
