How do I get logs off my FieldKit station?

Lindsay Starke - 2025-10-23 - Comments (0) - Using FieldKit

Logs tell us about what is happening in the FieldKit station.

- 1. Insert the microSD card into the FieldKit (unless one is already there) and reboot the station.
- 2. Using the station screen, select Tools>Restart and select "Yes" to confirm the reset.
- 3. When the station has already rebooted, remove the microSD card and insert it into your computer. A new screen should appear showing at least one folder with your station name and a few other files. These are the station logs.
- 4. Create a new folder on your computer with the name of your station. Copy all the files from the microSD card to your computer and paste them into the folder you created.
- 5. Compress the new folder to a .zip file and send it to us with the name of the station in question.
