Is there documentation on the solar option, such as where to connect and what voltages are allowed?

Lindsay Starke - 2025-04-02 - Comments (0) - FieldKit Stations

We don't offer technical support for third-party panels, but we've tested a wide variety of "nominal 12V" panels without issues. In theory, anything up to 20V should function. The connector is a JST-PH header marked "Solar" on the Lower board.
