How do I go about deploying my FieldKit's water chemistry sensors?

Lindsay Starke - 2025-11-05 - [Comentarios (0)](#) - [Sensores y módulos](#)

We recommend mounting a FieldKit Water station to buoys, docks, platforms, or bridges. It is important to ensure that your FieldKit case remains above the water. This is a very important consideration when deploying in an area where water level fluctuates seasonally.

Additional guidance for water deployment can be found in our Product Guide here [Water Station Deployment](#). For advice on deploying your water station in a particular environment, we recommend posting to the FieldKit [community forum](#) with details and images so that our community can help you devise the perfect solution.
